Negative ions can protect against airborne illness & much more!

Negative air ionizers are used by hospitals and private individuals alike to control the spread of airborne illness due to the remarkable lethal effects on bacterium and viruses.

In addition to negative air ionizers the market contains many cleaning agents to ward off differing strains of bacterium and viruses. However, **unless cleaning methods involve sterilization procedures common household agents do not typically kill bacterial spores which are more difficult to kill and resistant to many cleaning methods.**

A 2004 study showed that negative ions not only killed multiple forms of the bacteria but *also the bacterial spores*. Negative ions were found to be **99% effective against killing both airborne bacteria and surface bacteria**. *It is interesting to note that negative ions appear to have an affinity at killing pathogens (virus) that cause respiratory illness as shown in multiple studies.*

Pathogens (bacterium and viruses) can also do damage to our skin, causing acne, rash, and discoloration. Pathogens can also have a negative effect on our nervous system and impact moods.

Sterilization effects of negative ionization on bacteria. The left sample is untreated; the right, treated.

The Neck Gaiter.

Available at L-AV8.com

[Kit Core's technology](#) harnesses the protective and healing ability of negative ions, producing an easy to use product that can go with you anywhere. Through Kit Core's technology [L-AV8](#) has produced a facial covering, ***The Neck Gaiter, is the only product of its kind giving double protection; both as a facial covering and a virus killing shield.*** The protective powers of negative ions are weaved right in the fabric of the material. The Neck Gaiter can be worn and washed many times without reduction in its efficacy.

Negative Ions have been studied for over 50 years and have proven to be beneficial to our health in many ways.

(See just a few of these studies referenced below)

According to clinical research we can safely say that Negative Ions can:

- ✓ Protect against airborne illnesses.
- ✓ Effective against multiple strains of bacteria AND bacterial spores.
- ✓ Anti-viral.
- ✓ Removes ultra-fine particle matter from the air
- ✓ Faster wound healing.
- ✓ Reduces likelihood of secondary infections.
- ✓ Reducing bacteria in the air may improve acne and other skin conditions.

The Neck Gaiter: Pathogens trapped and destroyed by the power of Negative Ions.
