

Organic Bioenergetic Technology from KitCore Labs.

Welcome to the Future. Welcome to You: Enhanced. www.kitcorelabs.com

The KitCore Difference

Celliant, who is the main material supplier of many known brands, relies on technology that is dependent on thermoreceptors (a specified form of mechanoreceptors) which are specifically stimulated by either heat or cold. Stimulation of these receptors activates areas of the brain to stimulate a response that typically increases blood vessel dilation, increasing blood flow to the desired or affected area. While effective, this method is limited in comparison to utilizing a much greater quantum of mechanoreceptors as is found in the KitCore Lab's Organic Bioenergetic Process.

Independent study: Celiant vs KitCore Labs

Sample 1: Celiant fabric

Sample 2: Celiant fabric infused by KitCore Labs

KitCore Lab's bioenergetic process is comparable and in other studies proven greater than Celiant in Area and Average Intensity, suggesting a greater number of electrons emitted and available to react with the body.

Full study available in KitCore's flash drive/ Reference Studies.

More than Thermoreceptors:

The brain and body communicate through a series of five distinct receptors:

1. Mechanoreceptors

2. Thermoreceptors

3. Pain Receptors

4. Visual Receptors

5. Chemoreceptors

Mechanoreceptors are the most common throughout the human body, not thermoreceptors. Together, the functionality of *all* five types of receptors add up to how strong and fast you perform on a day-to-day basis. This is your body's Central Integrative State. Kit Core's technology works through all five types of receptors, not just one.

The KitCore Labs technology centers on the concept of field intensity (also known as amplitude or flux density), a quantitative description of an electromagnetic field that depends on current flow and direction producing a therapeutic effect on the human body at certain levels. Unlike Celiant, our technology is not solely dependent on temperature fluctuation to active neuro receptors. Our technology focuses on freeing electrons with the intent of increasing negative ions in a manner that improves your Central Integrative State.

Welcome to the Future. Welcome to You: Enhanced. www.kitcorelabs.com

The electromagnetic applications inside KitCore Labs' bioenergetic process functions at a field strength hundreds of thousands of times weaker than fields applied to FDA-approved transcranial magnetic stimulation systems (TMS) and diagnostic resonance imaging (MRI) systems. This low frequency allows activation by more receptors and thus greater increase in beneficial therapeutic effect.

<u>New research</u> shows that electrons do not spin around the nucleus of an atom as previously thought, instead they behave more like waves. The low-level frequencies used by KitCore Labs influences these waves to achieve a permanent increase in receptor response. Our technology influences and utilizes thousands of receptors to help activate the mind-body biofeedback mechanisms releasing many more electrons due to our receptor nature.

More electrons \rightarrow More Negative Ions = Greater well-being in almost every aspect of health.

This is the principle of the "biological windows", a concept developed by **Dr. Ross Adey** who discovered a range of electromagnetic frequencies to which the body responds more readily and very positively. This principle can likewise be applied to field intensity.

There is a specific "biological window" of electromagnetic intensity to which the human body responds quite well for healing, stress reduction, enhanced oxygen delivery and overall health benefits.

Research has proven the principle of this biological window in relation to electromagnetic field intensity... showing that human cells most readily express a cell-preserving gene, heat shock protein 70 (hsp70), at a field intensity less than 10 mT.

KitCore Labs' bioenergetic process utilizes extremely low field intensities that are able to communicate most effectively with the cell membrane. The result is the best possible wellness effect for all 75 trillion cells of the body.

Ultimately, it can be said that the native language of the human cell, from an electromagnetic perspective, is a subtle whisper.

- Better Blood Flow
- Less Body Pain
- Faster Recovery
- Better Sustain Hydration
- Better Sleep
- More Strength
- Quicker Reaction Time
- Better Balance

- Reduced Inflammation
- Greater Flexibility
- More Endurance
- Elevated Well-Being
